

GOLAM RYAN

Security Analyst · Governance, Risk & Compliance

CJIS · GDPR · HMIS · HIPAA · SOC 2 · NIST SP 800-37(Rev-2.0) · ISO 27001 · Azure Cloud Security · Audit & Control Documentation
+880 1627166428 · grsawan@gmail.com · linkedin.com/in/eng-ryan · github.com/Eng-Ryan · Dhaka, Bangladesh (open to work)

PROFESSIONAL SUMMARY

Security and compliance practitioner with 8 years across network, infrastructure and cloud engineering, now leading GRC and Azure security operations for a platform serving criminal-justice and victim-services organizations. Authored the organization's CJIS and GDPR control documentation and drove HIPAA Security Rule safeguard implementation across a regulated Azure environment. Owns the full vulnerability lifecycle — discovery, CVSS-based triage across four severity tiers, remediation tracking and audit sign-off — alongside least-privilege RBAC governance and Azure spend controls. CCNA and RHCE certified; pursuing AZ-500 and AZ-104.

CORE COMPETENCIES

Compliance Frameworks CJIS Security Policy · HIPAA Security Rule · GDPR (Art. 6, 9, 30) · SOC 2 · PCI DSS · NIST / FISMA · HUD HMIS Data Standards · IEC 62443

GRC Practice Control mapping & gap assessment · audit checklist authoring · policy documentation · risk analysis · evidence collection · remediation tracking · user access reviews · vendor / BAA review

Azure Cloud Security Microsoft Defender for Cloud · Azure Policy & Advisor · Key Vault · RBAC & custom roles · Conditional Access · PIM · AKS · PostgreSQL Flexible Server

Vulnerability Management CVSS triage · dependency & SCA auditing (Snyk) · Nmap · Wireshark · Burp Suite · Kali Linux · Metasploitable

Monitoring & Detection Azure Monitor · diagnostic log pipelines · Grafana · OSS · Splunk · Wazuh · Snort · Trellyx · Nagios

Network & Perimeter Cisco & Huawei routing / switching · OSPF, BGP, VLAN, MPLS · IPsec & L2TP VPN · Palo Alto, Fortinet, pfSense, OPNsense, CrowdStrike

Platforms Ubuntu · CentOS · Windows Server · Active Directory (ADDS, DNS, GPO) · VMware vSphere ESXi 7/8 · Veeam

PROFESSIONAL EXPERIENCE

NECX Inc. Ltd · Dhaka, Bangladesh

November 2025 – Present

Lead Security Engineer — Application & Security Infrastructure

- Own security compliance and audit across the organisation — CJIS, HIPAA, GDPR and SOC 2 — translating federal and EU requirements into enforceable technical controls in Azure for a platform used by criminal-justice and victim-services agencies.
- Authored the CJIS Audit Checklist (Rev 1.0), mapping every mandatory control to its CJIS Security Policy section across access control, authentication, encryption, network protection, audit logging, incident response and personnel security — with verification criteria, evidence requirements, control owners and pass/fail indicators for each item.
- Authored the GDPR compliance documentation set covering controller / processor determination, personal data inventory and data-flow mapping, Article 6 and 9 lawful basis, Article 30 records of processing, and data subject rights procedures.
- Led HIPAA Security Rule safeguard implementation: MFA enforcement, role-based least privilege, AES-256 encryption at rest and TLS in transit, ePHI audit logging, automatic session logoff, formal risk analysis, vendor BAA verification and a written breach-notification procedure aligned to HHS OCR requirements.
- Designed and delivered an FY2026 HUD-compliant Comparable Database for a Victim Service Provider onboarding — a fully isolated multi-tenant architecture required under VAWA, FVPSA and VOCA — implementing Universal Data Elements 3.01–3.917, HUD validation codes (8 / 9 / 99) and domestic-violence element 4.11 with enforced cross-tenant data boundaries.
- Managed the end-to-end vulnerability lifecycle for the VS360 platform across four CVSS severity tiers — including CVE-2025-7783 (SSRF, 9.4), CVE-2025-8101 and CVE-2023-30533 (prototype pollution) and CVE-2025-11849 (directory traversal) — documenting root cause, exploitation impact and validated fix versions, under a one-vulnerability-per-ticket model across 39 Jira issues that preserved ownership and traceability through to sign-off.
- Migrated application secrets from plaintext environment files to Azure Key Vault and audited remaining .env usage, eliminating credential exposure in source-controlled configuration.

- Designed a least-privilege custom Azure RBAC role scoped to three explicit permission strings, replacing Contributor-level grants for cross-functional VM access; executed secure offboarding and access revocation for departing personnel.
- Built an Azure diagnostic and metrics pipeline into Grafana OSS for security monitoring, with email alert routing to the administrator group; remediated Azure Advisor security recommendations across production and non-production subscriptions.
- Directed an Azure FinOps and spend-governance initiative: right-sized the production PostgreSQL server (Standard_D4 → D2), disabled High Availability on non-critical tiers, enabled nightly auto-shutdown on test infrastructure, set \$900/month budget alerting and assessed reserved instances, savings plans and AKS autoscaling options.

Fareast Islami Life Insurance Co. Ltd · Dhaka, Bangladesh

July 2024 – November 2025

Deputy Manager — IT & Network Engineering

- Deployed Wazuh across the primary server estate to establish host-based intrusion detection and file-integrity monitoring for a regulated financial institution.
- Stood up Nagios monitoring for critical resource thresholds — disk, CPU, service availability and network reachability — across divisional, sub-divisional and branch infrastructure nationwide.
- Automated Veeam backup and replication scheduling for central data resilience, maintained hybrid workloads across AWS EC2 and Azure, and retained ingress / egress traffic logs for network analysis and incident documentation.

Robi Axiata Limited · Dhaka, Bangladesh

May 2023 – June 2024

Project Engineer — Application Planning & Management

- Delivered concurrent IT projects across WIC Service Management, CCT Service Management and IVR functionality improvement, owning timelines and scope definition.
- Administered user access provisioning and periodic review for the QMS system across counter and financial user populations.

Huawei Technologies (BD) Ltd · NTMD Datacom, Dhaka

August 2021 – October 2022

Datacom Engineer

- Configured VLANs, subnets, VRRP and customer-edge routers across live enterprise carrier networks with zero-downtime change execution.
- Upgraded and verified services on Huawei NE40 routers and Layer-3 switches, performing live network monitoring and fault isolation.
- Administered Active Directory services (ADDS, DNS, Group Policy) and maintained customer change communication during network operations.

TeamOS Software Developers · Remote

July 2019 – September 2020

Network Design Engineer (Contract)

- Implemented perimeter security controls aligned to SOC 2, PCI DSS and NIST / FISMA requirements.
- Configured BGP peering with upstream ISPs, interface-level firewall filtering and hardened management services (SSH, SNMP, sFlow, Syslog).
- Delivered Terminal Services / Remote Desktop infrastructure and an email archive system supporting retention requirements.

Earlier Roles · Dhaka, Bangladesh

May 2017 – March 2019

IT Executive, Electra International Limited (Dec 2018 – Mar 2019) · **System Engineer**, Star Link Engineering Ltd — BSS / Core Switch Division (May 2017 – Jul 2018). IP commissioning on Huawei NE40 routers and L3 switches; telecom zone and site surveys; ISDP activities.

EDUCATION

B.Sc. in Computer Science · Daffodil International University, Dhaka · CGPA 3.34 / 4.00

2016

CERTIFICATIONS & TRAINING

AZ-500: Microsoft Azure Security Engineer Associate — in progress

AZ-104: Microsoft Azure Administrator Associate — in progress

CCNA: Cisco Certified Network Associate — New Horizons Computer Learning Center, Dhaka · 2017

RHCE: Red Hat Certified Engineer — New Horizons Computer Learning Center, Dhaka · 2017

AI Security & Governance · Incident Handler — completed
